GEM EVERBEARERS (Per.)

You will make no mistake in planting this variety either for the home garden or as a money crop. We set them extra early last spring on light sandy soil for a cash crop in the fall, and it is putting it light when I say they did have a wonderful crop and received high prices. You can do this if it's cold cash you are looking for. By setting early you can produce a fine crop on the new plants. Gem is outstanding in everbearing field. Unlike all everbearers previously introduced it makes many plants. It will make plants equal to any of the June varieties. It produces large crop of fine fruit in the fall. The fruit is sweet, rich and delicious, the flesh is fine grained and red clear through. The plants are not as large as Mastodon but if planted early it will make a very rank vigorous growth. The fruit is a little lighter colored than Mastodon and will stand handling exceptionally well. If you want shortcakes in the fall, plant Gem and you will not be disappointed.

FROST PROOF (Per.)

A new variety. Entirely different in many ways from any other variety we know of. It produces a large white bloom and later turns pink. Will stand more frost than any sort we have ever known and for that reason it was named Frost Proof. Plants are large, thrifty, tall and deep rooted. Makes just enough plants for a good fruiting row. Fruit large, good color and shaped much like Dunlap. Quality equal to most of the standard varieties. It is an extremely heavy cropper. Will stand shipping better than most varieties, being extra firm. Will keep in good condition long after picking. If you want a berry that will fill baskets and bring premium prices, try Frost Proof.

CONCORD GRAPE

The most reliable and profitable variety for garden or market purpose. Berries all large, flesh juicy, sweet and tender. Excellent flavor. Vine a strong grower, very hardy and productive.

1 Year No. 1 each 15c 6—75c 12—\$1.25 25—\$2.25 50—\$4.00

ASPARAGUS ROOTS

This is the only variety we know of which will produce a full crop in midsummer and a partial crop in the fall. About August 15th it begins to set fruit on young canes and will bear continually until frost. The canes makes a strong growth with an abundance of green foliage. The berries are bright red, medium size and good quality. Season very early. Ten days ahead of Cuthbert or Latham.

Price 12—35c 25—65c 100—\$2.00

ST. REGIS RED RASPBERRY

CULTURE. The soil for asparagus must be well drained. Dig trenches about 15 inches deep and 3 feet apart, using plenty of good manure. Set the roots about 18 inches apart, spreading them well. Cover to a depth of about 2 inches, adding more soil until the trenches are entirely filled by the end of the season. A light cutting, if any, should be made the next spring.

Mary Washington, Per 100 roots	\$ 1.50
2-yr. No. 1, Per 1000 roots	12.00

A FEW WORDS TO OUR FRIENDS

We are glad to greet you again through this our annual catalog and price list, our only salesman. In presenting it we desire to thank our many friends for their liberal patronage of seasons past which has increased from year to year, and the past season was a record breaker. We do not claim to grow the "Best Plants on Earth" because sunshine and showers favor all alike, but we do grow fine plants and give our business close personal attention. We try to get our orders off at the proper time, correctly labeled, good count and carefully packed. We believe in this we have been successful and as evidence of the fact we point to our rapidly growing business. We fully realize that a satisfied customer is the best advertisement we can have.

The strawberry and raspberry adapt themselves to almost every section of the country. Varieties and methods of culture suited to one section may be unsuited to another, so test alone will determine what is best suited to your soil and climate. We desire to call your attention to the list of varieties we offer. They are the best. We have taken great care to have our descriptions accurate. In the selection of varieties for our customers, you may rely upon what we say as being the result of careful observation and study of the different varieties as they appear under cultivation here. All progressive berry growers should test the most promising of the new varieties soon after they are introduced; then, if one is found that is superior, the grower has it in its prime. Try a few and keep up with the procession. One year's test of a new variety is not always conclusive, as each variety has an individuality that must be discovered before it can be grown at its best.

With us the spring of 1937 was not very favorable. The big drawback was the shortage of plants but this seemed to be the general complaint. With a favorable spring for setting, we were able to set our plants early thereby having a fine stand of well rooted plants for the spring of 1938. Many of our customers were disappointed last spring in not getting the varieties they desired simply because they waited until late before ordering. We urge you to order your plants early. If not convenient to pay when ordered make a small payment and pay balance when shipped.

Yours for better berries.

E. W. POTTER.

**Our Raspberry Fields Have Been Inspected Twice by the State Inspector
During the Past Summer and Pronounced Free
from Disease Both Times.**

OUR PLANTS ARE FRESH DUG AT SHIPPING TIME

INSTRUCTIONS TO PURCHASERS

ORDER EARLY

It will insure you getting the varieties you want and it will help us to get your plants shipped promptly when you want them.

PLEASE remit by P. O. Money Order, Express Order, Registered Letter or Bank Draft.

LOST ORDERS—

All orders are acknowledged by postal card same day received, but if you should not hear from us in a reasonable length of time after sending an order, PLEASE WRITE PLAINLY, giving full particulars, NAME and ADDRESS.

Once in a while an order is lost, but it usually is caused by the customer failing to give the full address. Therefore, PLEASE WRITE PLAINLY, especially your name.

TERMS: Payment must be made before shipment of plants. If not convenient to remit entire amount when order is sent, remit not less than one-fourth of the amount of the order and your order will be booked and held for you and you can remit the remainder when convenient before shipment of plants.

WE GUARANTEE the safe arrival of plants in good condition if sent by mail or express by May 1st.

WE TAKE the greatest care to have all plants true to name and seldom ever have a complaint, but should any prove otherwise than represented, we will not be responsible for any amount greater than actually paid us for the plants.

CLAIMS, if any, must be made on receipt of plants when they will be carefully examined, and if just, made satisfactory.

FOR OUR RESPONSIBILITY address with stamp the Peoples Bank, Leslie, Michigan, postmaster, express agent, or any official, professional or business man of the same place.

HOW TO GROW

Strawberries are grown successfully on light, sandy soil, and on heavy, clay soil, although—like most other crops—they respond very quickly to fertile well-drained soils that are full of humus.

In selecting a soil, keep in mind that any good garden soil will produce Strawberries. Sod land should be avoided on account of white grubs and cut worms.

If planting a large acreage, it is well to select a field that has been planted to some hoed or cultivated crop, where grass and weeds have been kept down and not allowed to go to seed.

Clipping the roots is not necessary, if you can get the roots into the soil without doubling them up.

WE MAINTAIN OUR GRADE by a careful selection of stock plants and right method of propagation from year to year, that tend with such a soil to produce stock of the greatest health and vigor, striving for the ideal fruiting row and perfect fruit from any plants that may be left unsold.

OUR PLANTS ARE FRESH DUG as wanted, nicely trimmed, ready for planting, carefully re-sorted and tied in bunches of 25; roots washed in cold water if necessary to make them clean, and packed with live moss in new handle baskets lined with oil paper, or in light ventilated crates, in such a manner that we guarantee safe arrival in good condition by express or mail to all parts of the United States. Plants by freight at buyer's risk.

TRUE TO NAME. We take great pains to have stock true to name and hold ourselves ready upon proper proof to refund money or replace any that prove untrue; but it is mutually agreed that we shall not be liable for a greater sum than amount paid for such stock.

SUBSTITUTION. Early in the season we have everything listed in this catalogue, but late in the season usually sell out some varieties. In case we are out of varieties ordered, please say if we shall substitute some variety of same season, suitable for your locality. We always notify customer if we have time to receive your answer before you wish plants shipped, but in case you do not request us to substitute we shall return the amount for the plants we do not have.

OUR PRICES AVERAGE LOWER than can be found elsewhere, when quality of stock and guarantee conditions are considered. Our references for responsibility are ample. You take no risk whatever. See elsewhere a certificate of health from the State Department of Agriculture. We invite investigation at all times.

STRAWBERRIES

Plant as early as possible—soon as weather will permit getting ground ready.

Be sure to order early. Early setting pays big. The plants start quicker, grow better and make better beds than late set plants. Take pains in setting. It pays.

We plant rows four feet apart. Plants fourteen to eighteen inches in the row.

Set plants on arrival, if possible. Dip the plants in water just before planting.

Plants should be cultivated and hoed as soon as they start growing.

It Is Very Important at the first hoeing to uncover the buds of any plants which have been planted too deep.

Cultivate often. Keeps the weeds out, and you will be pleased with results.

CULTURAL DIRECTIONS

MATING

All strawberry blossoms are either staminate—also called perfect—or pistillate, generally called imperfect.

The imperfect varieties, which are marked (Imp.) in catalog, should have a perfect variety, marked (Per.) set every third or fourth row to properly pollenate the blossoms of the imperfect sorts.

There seems to be a mistaken idea with some that this mixing of varieties is necessary with the perfect as well as the imperfect sorts, but this is not so. The perfect are self-pollinating and bear as well if set by themselves.

TIME TO SET PLANTS

Early Spring is the logical, natural, most successful and satisfactory time to set Strawberry plants. So don't neglect setting some plants this Spring, thinking you can make it up by early Fall planting. It can't be done.

How early? Just as soon as weather permits getting ground ready.

We are anxious at all times to please our customers, who in some way fail to get their plants in the spring, by sending them a few in the fall. However, spring is by far the best time to plant strawberries. Spring planting is preferred because weather conditions are more favorable and because the plants come into bearing the next season. Fall set plants have to go through two winters before they start to fruit and the effect of winter is never beneficial to their plantation. To those who are unfortunate and do not obtain their plants in the spring, we will gladly supply their needs at double the price in catalog.

NORTHERN GROWN PLANTS

A strawberry is never in so prime a condition as when fully grown, matured and dormant. Our friends in the South have recognized that our Northern grown plants are safer to set, because of their more dormant condition on arrival, while commercial growers in the North and West would not think of setting Southern stock of a more advanced growth. We also hold that while strawberry will grow and thrive nearly everywhere, the North is its natural home, where it fits the conditions more naturally for a higher development.

THE DESCRIPTION of the different varieties is as they have done with us at fruiting time. Varieties that we have not fruited we have given originator's description, or others, that we consider best authority.

Be sure to order early enough so that plants can be right at hand as soon as your ground is ready. Early setting pays big—the plants start quicker, grow better and make better beds than plants set late.

WE SHIP PLANTS

to Southern customers during mild weather any time after they receive this catalog, and to the North as late as the 15th of May, but for all sections it is advisable to order early and name date of shipment as early as you can use the plants. Plants shipped early have less foliage, can be packed lighter, and if planted almost always do well.

OUR SHIPPING SEASON

begins with the Southern orders, as soon as frost is out of the ground in spring, often in March. We aim to set out plants in early April. If ordered late in the season, it is always best to name a second or third choice in case a variety is sold out, or leave it to us, stating soil conditions and other particulars. We will do our best to please you, but order early and have plants come early, if you can.

REMOVING THE BLOSSOMS

Strawberry plants that are set out this Spring should not be allowed to bear fruit until the following spring. The blossoms should be pinched off, for to let them ripen fruit the first year would weaken the growth of the plants and is liable to kill them. Just as soon as you remove the blossoms your plant starts to work building up a root system. The heavy, vigorous root system is essential to enable the plant to come to its fullest possibilities of production.

PLANTS WE GROW

BELLMAR (Per.)

Shortage of plants prevented us from setting heavy to this variety for June 1937 fruiting, however, the few we did fruit pleases us as well as our customers who received the fruit. It does exceptionally well on our farms. The plant growth is just right for a good fruiting row. The fruit is large dark red and of good quality. This is another good variety originated with the U. S. Department of Agriculture. Parentage same as Blakemore.

BLAKEMORE (Per.)

Wherever this variety does well it's a winner. We have reports that it does remarkably well in some sections while in others not so good. It's a good plant maker and produces beautiful fruit, bright red in color, firm and stands up well after picking. Many report it as a good canning berry. Originated with the U. S. Department of Agriculture. Worthy of trial.

DORSETT (Per.)

One of the new varieties which has come in to public favor very fast, due mostly to size of fruit and quality. It has an exceptional vigor of plant growth. Plants large deep rooted and makes a growth just right for producing large fancy fruit. Dorsett is being planted exceptionally heavy by commercial growers. Will make a little better plant growth than Premier. This variety produces one of the finest berries we have ever known. The quality can't be beat. Fruit very large, light red in color and holds its color long after picking. Season rather early. Don't fail to try this wonderful new variety.

FAIRFAX (Per.)

This is another new sort of the same origin as Dorsett making it a sister variety. It is much the same in plant growth, making extra large plants that grow high so the fruit is always up off the ground. This new variety is also very productive producing large fancy fruit but a trifle darker than Dorsett. Both of these new varieties have been free from leaf spot. In some sections the growers tell us this variety is being used quite extensively for canning due to the dark color of the fruit. Worthy of trial.

GIBSON (Per.)

This is a midseason berry grown quite extensively throughout this state as a market berry because it produces large crops of good size fruit and firm enough for trucking or shipping. Some report it being much like Dunlap. The Gibson produces a large dark red berry of fairly good quality and holds its size throughout the picking season. Produces just enough plants for a good fruiting row.

CATSKILL (Per.)

We have fruited this new variety for two seasons. It came from the New York Experiment Station and is said to be a cross of Marshall and Premier. It sure is a strong, vigorous grower, making large plants the growth being just right for a good fruiting row. The fruit grows on a rather long fruiting stalk making it easy to pick. The fruit is extremely large and the brightness of color makes it very attractive. This new variety will sure fill berry baskets. Quality equal to Premier. You will make no mistake planting Catskill.

Our Plants Are Fresh Dug at Shipping Time

DUNLAP (Per.)

The choice of thousands berry growers account of quality. A variety which has stood the test for 20 years. Best known variety for canning since Warfield was discarded. It does well in most any type of soil and in most all sections of the country. Makes plants freely and produces large crop of dark red fruit. Fruit good size and high quality. "King of the canners" is the slogan that has followed this variety always.

PEARL (Per.)

Late. A wonderful new, extra-late variety. It can be depended upon to produce both quantity and quality. Because of its late blooming season, it is an ideal variety for frosty locations. It makes an ideal fruiting row. Berries are large, uniform, solid, and red clear through . . . very attractive, with excellent flavor. This variety prolongs your season, and increases your profits. Late berries always bring fancy prices. Try them.

DR. BURRILL (Per.)

We find this variety very similar to Dunlap. It's a good variety, producing good commercial purposes. Makes plenty plants and produces good size fruit of good good fruiting row.

MISSIONARY (Per.)

This variety is best known in the South where it is used almost universal for commercial purposes. Makes planty plants and produces good size fruit of good quality.

PREMIER (Per.)

We are usually sold out on this variety before the season is half over. This speaks for itself, what growers think of this variety. It has replaced all of those varieties called early. It has so many good qualities as an early cropper that it has spread in popular favor very rapidly. It is still recognized as the one early variety that's hard to beat. It is a sure cropper and very productive. Under about all conditions it usually proves very satisfactory. Growers who raise strawberries regularly should plant Premier for one of their main crops unless some other variety proves more satisfactory in your section. Under favorable conditions Premier makes plants enough for a well matted row. Berries are medium red in color, getting darker as they ripen and moderately firm. They rank well with most of the standard varieties for quality. Season early—fruit large.

MASTODON (Per.)

This variety has stood supreme among the everbearers for some time. Its one great drawback has been that it failed to make many plants. Along came Gem which produces equally as large fruit and makes plenty of plants. We have advised our customers to plant Gem, however, we can supply Mastodon plants. They produce large fruit of fair quality. Will not stand handling like Gem.

KING WEALTHY (Per.)

Very late. There are several good late varieties but none better than Wealthy. Few as good. The fruit is large, handsome, well shaped and dark red. A wonderful shipper because of its firmness. Plants large and well rooted. You will not be disappointed—try them.

GARDEN SEEDS

	Per lb.	Per lb.	
Onions So. Port Yel. Globe	\$1.25	Peas, any variety12
Onions So. Port Brigham	1.25	Radish, any variety65
Onions Early Globe	1.25	Carrot, any variety75
Onions White Globe	1.25	Parsnips, any variety75

Sweet Corn, all varieties15		

Can furnish anything you need in seeds.

For best results with Everbearing Strawberries, good strong plants must be used and set early. Keep blossoms picked until July 1st to 15th.

RED RASPBERRIES

CHIEF. Best early, Red Raspberry. This is a new variety which has had sufficient testing in commercial fields to safely place it as one which is going to replace all other early varieties. It could rightly be called an Early Latham, because it resembles that variety in many ways. Equal in quality, it out-yields the Latham. Ten days earlier. Fruit is good, bright red, firm and of excellent quality. The Plants are vigorous in growth, perfectly hardy and seem to be resistant to mosaic.

LATHAM. This grand mid-season variety is winning favor wherever grown, its popularity having spread throughout the entire Middle and Eastern States. Every fruit grower in testing this wonderful variety reports favorably as to the large size and excellent quality of its fruit; its entire resistance to frost during the coldest winters and the enormous quantities of fruit it will produce. It is large, handsome and delicious from the beginning to the last picking.

NEWBURG

The New Red Raspberry was introduced by the New York Experimental Station. Their description says,—Berries are large, in fact, larger than those of any other sort; very firm. Color lighter than Latham, slightly coarse in appearance and a little better than Latham in quality. We have fruited them and find they are the largest of all the reds; quality better than Latham, firm and a very heavy cropper. Few days earlier than Latham.

BLACK RASPBERRIES

CUMBERLAND. King of the Black Caps. Sure money maker. No Black Raspberry is grown as extensively and none has made as much money for Fruit Growers as this wonderful variety. The plants are healthy, vigorous growers, throwing up stout, stocky, well branched canes. Fruit is large, rich black in color, firm and of highest quality. Ripens its fruit in mid-season and continues for three weeks. The Cumberland is less susceptible to disease than most varieties.

LOGAN

New Variety. Ripens 10 days ahead of Cumberland, which allows the grower to get on the market ahead of other varieties. The new Logan produces immense crops of jet black berries as large as Cumberland. Does not crumble in picking, stands severe weather conditions without damage. Have only a limited number of plants.

BLACKBERRIES

ELDORADO. We grow and sell only this one variety, because it is so much superior to all others. It is unusually hardy. Have never known it to winter kill or fail to produce a good crop. The berries are large, jet black and of excellent quality. They form in large clusters and ripen well together.

PURPLE RASPBERRIES

COLUMBIAN—The leading variety. Mid-season, vigorous and productive. Berries dark, fairly firm, with rich sprightly flavor.

OUR PLANTS ARE FRESH DUG AT SHIPPING TIME

We would like the names of the people in your section who are interested in fruit growing. Kindly write their names on back of order sheet. Same will be appreciated.

TO COMPUTE AMOUNT OF POSTAGE

First ascertain the group in which you are located and then refer to list below, which will tell you the amount of postage to send.

Group 1: Central and Northern Michigan, Southeast Wisconsin, Northern Illinois, Central and Northern Indiana, Western Ohio.

Group 2: Balance of Wisconsin, Illinois, Indiana and Ohio.

Group 3: Minnesota, Iowa, Missouri, Arkansas, Kentucky, Tennessee, North Carolina, Virginia, West Virginia, Pennsylvania, New York.

Group 4: North Dakota, South Dakota, Nebraska, Colorado, Kansas, Oklahoma.

Group 5: Montana, Wyoming, Idaho, Utah, California.

- Group 1: Add 10c for each 100 Strawberry Plants.
- Group 2: Add 14c for each 100 Strawberry Plants.
- Group 3: Add 21c for each 100 Strawberry Plants.
- Group 4: Add 28c for each 100 Strawberry Plants.
- Group 5: Add 35c for each 100 Strawberry Plants.

25 Raspberry or Blackberry Plants take the same postage as 100 Strawberry.
Write for special prices on 3,000 or more plants.
